TABLE OF
CONTENTS:

Foreword

3

Design and Operation of Steam Turbine Installations

Grinberg, M. I., Doctor of Technical Sciences, Professor. Progress in Turbine Building at the Leningrad Metalworking Plant

9

In this article the author discusses the past and present accomplishments, and outlines plans for future developments in the field of steam and gas turbine building at the Leningrad Metalworking Plant.

Butyrin, A. S., Engineer. Standardization of the General Arrangement of Steam Turbine Installations

17

In this article the author gives an account of experience with general arrangement of steam turbine installations gained at the Leningrad Metalworking Plant. He discusses the procedure for preparing detailed drawings and presents diagrams of standard arrangements of steam turbine installations.

Card ~~2/3~~

Steam and Gas Turbine (Cont.)

584

Nikolayev, G. V., Engineer. Condensers for LMZ Turbines

31

The author presents details of design and construction of various types of condensers developed at the Leningrad Metalworking Plant.

Peysikhis, B. I., Engineer. Special Valves and Equipment for Steam Turbine Installation.

48

The author presents a detailed description of safety valves and special regulating devices used in high-pressure steam turbine installations. The article contains numerous diagrams and specifications of various types of valves.

Shapiro, Yu. B., Engineer. Selection of Thermal Scheme for Steam Turbine Installations

68

This article deals with the basic problems involved in the developing of new regenerative vapor-cycles. The author presents a basic method for selecting feed-water preheating temperatures, and the optimum distribution of steam extraction points in a regenerative vapor-cycle. There are 7 references, of which 6 are Soviet, and 1 English.

TITLE: Special Accessories of Steam-Turbine Plants

PERIODICAL: Tr. Leningr. metallich. z-da, 1957, Nr 5, pp 48-51

ABSTRACT: Manufactured by LMZ, special accessories for steam-turbine plants can be subdivided into protective and regulating. The former comprise: nonreturn and safety valves on steam-extraction pipes and protective devices on high-pressure heaters. The latter comprise: automatic compensating devices installed on the outflow lines of regenerative heaters and other heat exchangers. Technical data on type KOS nonreturn valves is presented. All valves are equipped with a position indicator, and valves intended for controlled steam extractions are equipped with a disk-position indicator. Fully-automatic valves with servomotors controlled by a special lever-type valve are used on 8-13-tm process-steam extractions and also for 18- and 34-tm units.

Card 1/1

protective lines. Not less than two safety valves are provided for each boiler, one for the full steam discharge of the turbine. High-pressure boilers are equipped with an automatic protective device that protects the boiler from water hammer or in case the heater becomes flooded with water. The protective device is a disturbance of water tightness in the piping system. The protective device consists of three valves: direct, bypass, and nonreturn; a gauge of water level valve associated with the heater condensate drain is also provided. The condensate drains manufactured by the plant have the same construction as direct. Depending on working conditions, by the size of their cross-section,

Liberman, L. Ya., Candidate of Technical Sciences, and M.I. Peysikhis, Engineer.

Spravochnik po svoystvam Stal-ey, primenyayemykh v Kotloturbostroyenii (Handbook on Properties of Steels Used in Boiler and Turbine Construction) 2d ed., enl. Moscow, Mashgiz, 1948. 408 p. (Series: Tsentral'nyy nauchno-issledovatel'skiy kotloturbinnyy institut. [Izdaniya] kn. 32) Errata slip inserted. 8,500 copies printed.

Sponsoring Agency: Tsentral'nyy nauchno-issledovatel'skiy kotloturbinnyy institut.

Ed.: A.A. Kanayev, Candidate of Technical Sciences; Tech. Ed.: P.G. Pol'skaya.

PURPOSE: This handbook is intended for designers, physical metallurgists, metallurgists, metallurgists of boiler and turbine plants, and also personnel of plant laboratories and scientific research institutes of other branches of machine building.

COVERAGE: This is the second edition of a handbook on boiler and turbine steels originally published in 1955. The present edition describes 90 types of steels,

Card 1/9

Handbook on Properties (Cont.)

SOV/1936

and is based exclusively on experimental material obtained during the past several years at various Soviet scientific research institutes and plant laboratories. Contributions from TsKII (Central Committee for Heavy Industry), TsNIIMASH (Central Scientific Research Institute of Heavy Machinery), TsNIIM (Central Scientific Research Institute of Ferrous Metallurgy), and the laboratories of the Leningradskiy metallicheskiy zavod (Leningrad Metal Plant), Khar'kovskiy turbinnyy zavod (Khar'kov Turbine Plant), Nevskiy mashinostroitel'nyy zavod (Neva Machine-building Plant), and the Novo-Kramatorskiy metallurgicheskiy zavod (New Metallurgical Plant in Kramatorsk) are represented. The handbook covers systematically the whole range of materials from carbon steels to the most heat-resistant high-alloy and nonferrous metals used at present, or which may be used in the near future, in manufacturing boiler and steam- and gas-turbines. The authors say that all available information for each type of steel on mechanical properties, stability of properties at various temperatures, data on creep-resistant and creep-rupture properties, and design graphs for selecting design stresses and strains are presented. For those steel types which are intended for fastening parts of boiler and turbine units, stress-relaxation characteristics are also presented. The handbook includes existing GOST (All-Union State Standards) and Technical Specifications for materials used in boiler and turbine making. The thermal conductivity coefficients experimentally determined by Engineer R.Ye. Krzhizhamovskiy, TsKII, and not included in the first edition for many types of steel, are given. The authors thank chief specialist on metallurgy Ya.I. Kulandin of the Gosplan

TITLE: Signal-to-noise ratio monitor

SOURCE: Elektrosvyaz', no. 3, 1964, 5-16

TOPIC TAGS: signal, signal noise ratio, signal noise ratio monitor, frequency manipulated signal, noise isolation

ABSTRACT: Two systems of a signal-to-noise ratio monitor are considered (see Enclosure 1): (1) amplitude limiter plus frequency discriminator type and (2) AGC plus amplitude detector type. Both were developed in 1960-61 for frequency-keyed signal reception. Theoretical relations for the square spectral density of noise at the output of frequency and amplitude detectors are established. Higher components of keying frequency pass through the band filter along with the noise that produces information in the monitor; these components

Card 1/3

ACCESSION NR: AP4026138

are called "residue." The effects of the residue and its contribution to the monitor error are discussed as is the connection between the inertia of the monitor and that of the information channel. Some hints for designing the ratio monitor are offered. Experimental verification of both systems of the monitor was made by connecting them to the 215-kc IF channel of a short-wave receiver. The latter's internal noise was regarded as a noise source. Tabulated data of the maximum signal-to-noise ratio permits a rough evaluation of the effects of the passband, frequency deviation, h-f filter cutoff frequency, and ondulation of the IF-amplifier band filter. Orig. art. has: 13 figures, 18 formulas, and 3 tables.

PEYSIKHNIKA, A. L.

AUTHOR: Peysiknman, A. L. 108-13-6-5/11

TITLE: On the Optimum Transmission Band of a Resonance System for Pulses With Arbitrary Reciprocal of the Pulse Duty Factor (Ob optimal'noy poloze propuskaniya rezonansnoy sistemy dlya impul'sov s proizvol'noy skvazhnost'yu)

PERIODICAL: Radiotekhnika, 1958, Vol. 13, Nr 5, pp. 40-46 (USSR)

ABSTRACT: Here the dependence of the optimum transmission band of a resonance system with respect to the reception threshold on the reciprocal of the pulse duty factor β is investigated. The problem is solved in general form and in application upon the pulses of a rectangular and a bell-shaped approximation. The here derived equation (1) represents the solution of the problem of the optimum band from the aspect of the maximum signal-to-noise ratio in general form. It is valid for pulses the phase frequency spectrum of which is linear and the amplitude spectrum functions of which can be integrated and differentiated to the second order

Card 1/3

On the Optimum Transmission Band of a Resonance System for Pulses With Arbitrary Reciprocal of the Pulse Duty Factor 108-13-6-5/11

inclusively. These limitations allow to solve this problem at least for the two basic pulse approximations - the rectangular and the bell-shaped one. Summarizingly it is stated: 1) The optimum transmission band of a pulse-receiver (from the aspect of the maximum signal-to-noise ratio) does not depend only on the pulse duration but also depends on the reciprocal of its pulse duty factor β . This dependence for pulses with a linear phase spectrum function is expressed by equation (1). This equation contains the integral and two derivatives of the amplitude spectrum function of a single pulse. 2) In the case of really applied pulses the mentioned optimum

transmission band is $\Delta f_{0.7 \text{ opt}} = \frac{1.2}{\tau} \lambda$, whereby $\lambda = 1$ at $\beta \gg 100$; at $\beta < 100$ $\lambda < 1$ and is taken from the enclosed diagram. For a signal with $\beta < 6$ a normalized optimum band does not exist. (τ - duration of the pulse). There are 6 figures and 6 references, all of which are Soviet.

TITLE: Interference stability and relative effectiveness of multi-position frequency telegraphy in intermitten communications channels

SOURCE: Elektrosvyaz', no. 12, 1966, 23-30

TOPIC TAGS: telegraphy, multichannel communication

SUB CODE: 17

ABSTRACT: The relative effectiveness of multi-positional frequency telegraphy with a fluctuating signal is analyzed; the analysis indicates that an increase in transmission capacity over a binary system is possible in the intermittent operating mode. The relative effectiveness of the system with rayleigh fading and in a meteor scatter link are approximately identical. The mean probability of error in a multi-positional system with non-coherent reception and fluctuational noise is calculated. The gain in average transmission rate produced by the multi-channel variant of this system is calculated. In selecting a system, the frequency band occupied should also be considered, as well as the relative complication of the apparatus required. Where a large number of channels are to be used, the problem of complication of apparatus should be analyzed separately. Expressions are produced for the probability of error in an element, which can be used for analysis of the effectiveness of a single channel multi-positional system. An appendix is included which presents the development of an expression for maximum relative error. Orig. art. has: 4 figures and 14 formulas. [JPRS: 40,102]

TITLE: A Machine for Cutting Austenite Steel Pipes

PERIODICAL: Novaya tekhn. montazhn. i spets. rabot. v str-ve, 1959, No 11,
pp. 28-29

TEXT: A modernized portable machine of ЦНИИМАШ (TsNIIIMASH) is used for cutting pipes made of 18-8 steel, low-carbon steel, and non-ferrous metals. The machine operates on the principle of the pendulum saw with the grinding disk of the 3Б60Т2-ГБ-(ЕБ60Т2-ЗБ-) type with 200-mm diameter and 1.5-mm thickness. The weight of the machine is 40 kg, the overall sizes are 580 x 330 x 380 mm. Pipes of 20 - 60 mm diameter are cut during 10 - 30 sec. The machine makes it possible to cut sheet steel, when it is mounted on wheels and is displaced on rails. There is 1 figure.

PERIODICAL: Referativnyy zhurnal, Geofizika, no. 9, 1962, 43, abstract 9A285 (Geol. nefti i gaza, no. 3, 1962, 50-53)

TEXT: The results of investigating the natural γ -activity of bottom sediment samples in separate parts of the Caspian Sea are stated. By means of a device, which is described, the sea bottom's γ -activity was measured in order to ascertain whether underwater radiometric surveying can be conducted for the purpose of seeking oil and gas deposits and mapping the sea floor geologically. A method is suggested for the execution of underwater radiometric surveying. The results of experimental work in a number of oil-bearing areas are described. TITLE: Automatic welding of electric motor shafts from dissimilar steels, 8

SOURCE: Avtomaticheskaya svarka, no. 8, 1966, 44-47

TOPIC TAGS: inert gas welding, low carbon steel, austenite steel, argon, carbon dioxide, AUTOMATIC WELDING, SHAFT

ABSTRACT: The authors discuss a process developed by the Institute of Electric Welding in cooperation with the Kharkov Electrotechnical Plant for manufacturing shafts in which low-carbon 5 steel (GOST 380-60) is welded to Kh18N9T austenite steel (GOST 5632-61). Circular components 36-60 mm in diameter are welded by this method. While components of this type are most easily joined by resistance welding, this method cannot be used at the Kharkov Electrotechnical Plant at the present time and therefore gas-arc welding is used. Tests show that the best joints are produced by using argon gas and Sv-04Kh19Ni1M3 electrode wire. The stability of the structure in the heat-affected zone of the weld was tested by holding a welded specimen at 200°C for 200

hours. The results show no appreciable changes in the structure of the weld zone. The welding is done on a lathe which is slowed to 0.5-10 rpm by an additional speed reducer. A semiautomatic A-929 welding machine with a modified electric circuit is mounted on the lathe. The following conditions are recommended for welding in argon: welding current -- 200 a, arc voltage -- 24-26 v, electrode gap -- 15-20 mm and rate of gas flow -- 12-17 l/min. Carbon dioxide may be used at the same rate of flow if the arc voltage is reduced to 20-22 v and the electrode gap is narrowed to 10-15 mm. Orig. art. has: 5 figures, 1 table.

Description of testing apparatus and of experiments on forced heat convection in two mineral oils of very widely different viscosity when moving through a rectangular canal (2.2 x 17 mm wide) with small Reynolds numbers (< 2000). The results of these experiments, as well as those of Polon [*Dis. Warm.*, no. 18, 1943], of Sherwood, Kiley, and Mangen [*Indust. Engng. Chem.*, no. 3, 1937], and of Sieder and Tate [ibid., no. 12, 1920] in round pipes, can be summarized in two formulas for the relative temperature difference of the liquid $\Theta = (t_1 - t_2)/(t_1 - t_0)$ (t_1 temperature of the entering fluid, t_2 mean temperature of the outgoing fluid, t_0 temperature of the inner wall of the pipe). The difference is a function of the geometrical form of the pipe section, of Prandtl's number, of the ratio d/l (d equivalent diameter, l length of the tube), of Prandtl number, and of the ratio μ_1/μ_2 (μ_1 viscosity of the entering fluid, μ_2 mean viscosity of the fluid in the tube). The dependence upon these last two numbers is different when the direction of heat transfer is changed.

The oil of Canadian hemp (*Apocynum venetum* L.). YA. PAVL. *Moskovo Zhitoe Delo* 1930, No. 3, 44-5. -Several samples of the seeds collected in Kazakhstan (central Asia) showed a wide variation in size (0.317-1.721 g per 1000 seeds), moisture 7.65-8.97%, oil content (calcd. on dry wt.) 21.45-32.40%. The seeds also contained a large amt. of tannins (11.7%). The cold-pressed oil gave the following const.: sp gr 0.9278, acid no. 3.44, sapon no. 103.62, I no. 134.39-141.40, ester no. 190.18, Behner no. 94, n_D 1.4770-1.4781. The seeds are therefore of interest both as a source of a drying oil and a tanning material. E. HIKLOVA

The changes of the oil content of flaxseed and of the properties of linseed oil with the ripening after harvesting. A. SACHKOVYILKINOVA AND YA. PAVL. *Moskovo Zhitoe Delo* No. 11-12, 60-6(1930). -The process of oil formation in flaxseed continues after harvesting and is accompanied by an increase in wt. of the seeds as well as in their oil content and an increase in the I no. of the oil. E. HIKLOVA

The effect of mineral fertilizers on flax. YA. V. PAVL. -*Commission Socialistic Agr. No. 6, 56-60(1932)*. -P. shows experimentally that podzols need N as the first minimum for flax, followed by P and K. J. S. JOFFE

AGRICULTURAL LITERATURE CLASSIFICATION

The use of boron fertilizers in flax agriculture. V. A. Pavlov. *Lenin Komsomol*, U. S. S. R., 1938, No. 4, 1937, 8/11/38. *Kolhoz. Krestni Zhur.* 1, No. 11, 12, 1938. A highly positive effect of B on the yield of straw, seeds and fibers of flax and on its quality was demonstrated. The action of B is mostly noticeable on virgin and on limed soils, and is expressed in a lowering of bacterial diseases of flax. An addition of 3 kg of B/hectare increased the yield, as compared with the yield obtained from N-P-K fertilizers, of straw from 20.5-31.6 to 32.5-35.2 quintals/hectare, of seeds from 3.1-5.3 to 7.5-7.6, and of fibers from 2.5-5.1 to 13-16.6. It was demonstrated that instead of borax of the B-Mg fertilizers a ground boron hydroborate can be used successfully. When added in equal amounts with borax, the B content, its effect even surpasses that of borax. For flax best results are obtained from the addition of 3-6 kg/hectare of borax (40-60% B₂O₃) or 5.5-6 kg/hectare of hydroborate (20% B₂O₃). The equal effectiveness of hydroborate with borax must be verified with additional experiments. Not less than 10-20% of all cultivated flax fields need B fertilizers for which P. considers 1200-2400 tons of the 20% hydroborate is necessary. W. R. Henn

PEYVE, Ya. V.

101

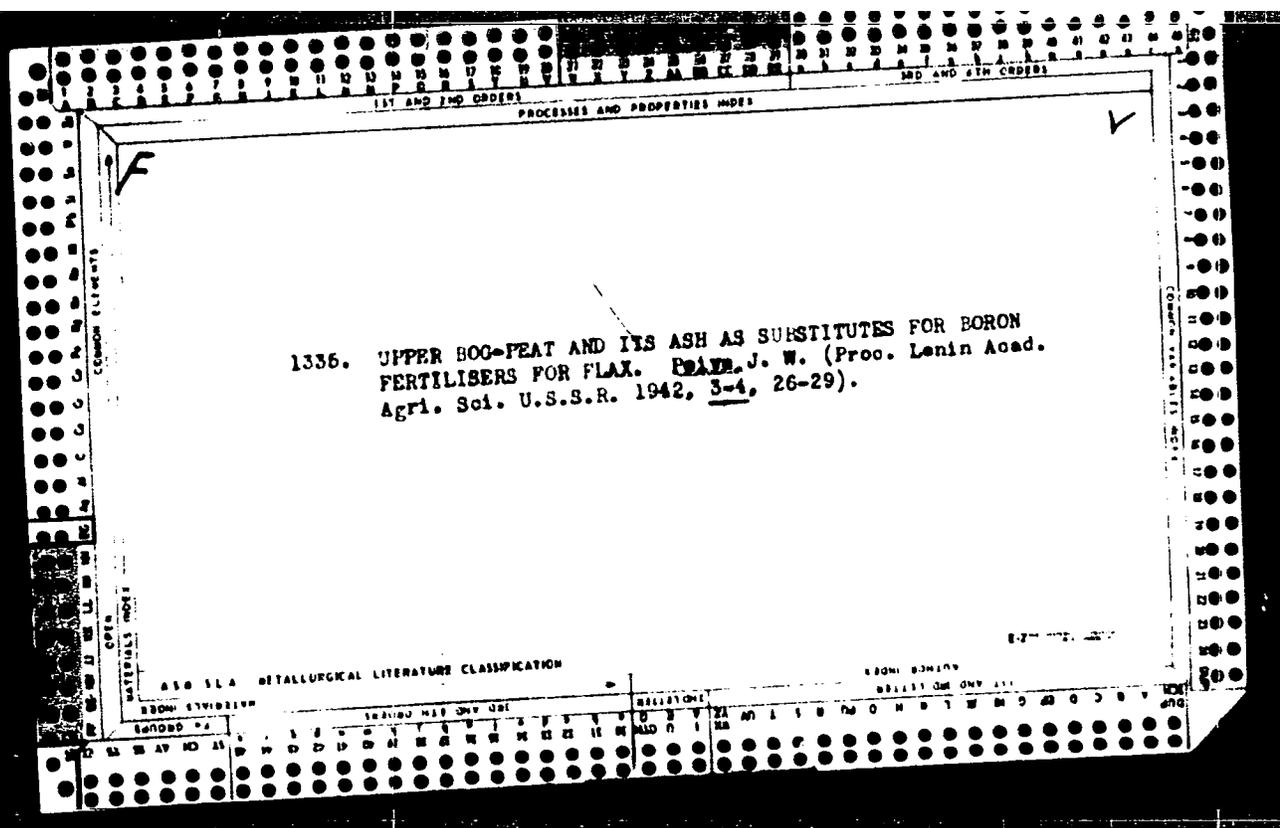

The effect of fertilizers added to newly cultivated soils on the growth of flax. Ya. V. Pelyu and A. S. Rodov. *Voprosy Oshchraseniya i Vozrastaniya Zemel. Pochvy i Ikh Oshchraseniye Nauch. na Lenin 1930, No. 101. Akad. Nauch. SSSR 1930, No. 10, p. 1-10.* K fertilizer was highly effective on all virgin soils. NH₄ fertilizers, particularly in combination with K fertilizers, had an unfavorable effect on flax grown on very acid soils, a favorable effect on medium and weakly acid virgin soils. Phosphoric in combination with sylvite increased on virgin soils the total yield of flax by 12.24 quintals ha and superphosphate increased it by 4.0 quintals ha. Phosphoric is the best P fertilizer for ploughed virgin soils. On dark newly cultivated soils it increases the yields of flax straw, seeds and fiber. The B fertilizers investigated were borax, B-Mg fertilizers and hydroborate. W. R. Henn

The comparative effects of vivianite, superphosphate
 and phosphorite on flax in different soils. Ya. V. Pelye
Len i Komsolys 1939, No. 1, 32-4. *Khim. Referat ZNU*
 1939, No. 6, 64, cf. C. A. 34, 2084. Vivianite, when not
 enriched with N and K, did not affect the yield of flax
 fibers. When enriched with N and K both vivianite and
 phosphorite were effective. In an acid podzol soil phos-
 phorite was more effective than superphosphate and
 vivianite, while in a slightly podzol soil vivianite was more
 effective than either the superphosphate or the phospho-
 rite flour. In slightly podzol clayey soils introduction of
 lime and of nitrate N was not necessary to increase the
 effectiveness of vivianite. Vivianite and the other forms
 of phosphate showed a favorable influence on flax with a
 nephelite base. In its afteraction vivianite was equal to
 superphosphate and phosphorite. All forms of phosphate
 more than doubled the crops of clover seeds. Nephelite
 fertilizers were effective even in the absence of P. The
 nephelite tailings evidently contain P. W. R. Henn.

PEYVE, Ya.V.

Title : General characteristic, classification and spatial orientation of plutonic fractures. Part 1

Periodical : Izv. AN SSSR. Ser. geol. 1, 90 - 105, Jan 1956

Abstract : A geological explanation is given of plutonic fractures and their basic three types of platformic, geosynclinal, marginal deflections are described. The laws governing the spatial orientation of plutonic fractures in various geosynclinal regions are discussed. Seventeen USSR references (1945-1954).

FEIVE, A.V. [Feyve, A.V.]; STRAHOV, N.M. [Strakhov, N.M.]; IANSIN, A.L.
[Yanshin, A.L.]

Some very important problems in the field of theoretical geology.
Analele geol geogr 16 no.2:26-34 Ap-Je 62.

AFANAS'YEV, G.D.; BARSANOV, G.P.; VLASOV, K.A.; KORZHINSKIY, D.S.; MIRCHINK,
M.F.; PAVLOVSKIY, Ye.V.; PEYVE, A.V.; SMIRNOV, V.I.; CHUKHROV,
F.V.; SHCHERBAKOV, D.I.; YABLOKOV, V.S.

In memory of Kh.M.Abdullaev. Izv. AN SSSR. Ser.geol. 27 no.9:
117-118 § '62. (MIRA 15:9)
(Abdullaev, Khabib Mikhamedovich, 1912 (?) - 1962)

SHCHERBAKOV, D.I., akademik; PEYVE, A.V.

Hero of Socialist Labor Academician D.V.Nalivkin. Vest. AN SSSR
33 no.7:54-55 JI '63. (MIRA 16:8)

1. Chlen-korrespondent AN SSSR (for Peyve).
(Nalivkin, Dmitrii Vasil'evich, 1889-)

NALIVKIN, D.V., glav. red.; BELYAYEVSKIY, N.A., zam. glav. red.;

red.; VOSKRESENSKAYA, N.A., red.; KALYUZHNYI, V.I.A., otv. red.
vyp.; NATOCHIY, P.A., red. vyp.; MEL'NIK, A.F., red. izd-va;
LISCVETS, A.M., tekhn. red.

[Study of the geology of the U.S.S.R.] Geologicheskaya izu-
chennost' SSSR. Kiev, Izd-vo AN Ukr.SSR. Vol.31. [Ukrainian
S.S.R. (western provinces); period 1951-1955] Ukrainskaya SSR
(zapadnye oblasti); period 1951-1955. No.1. [Published studies
and reviews] Opublikovannye raboty i obzornye glavy. 1963. 178 p.
Vol.32. [Central and eastern provinces of the Ukrainian SSR;
period 1951-1955] Ukrainskaya SSR (tsentral'nye i vostochnye
oblasti period 1951-1955. No.1. [Published studies] Opublikovan-
nye raboty. 1963. 326 p. (MIRA 16:10)
(Ukraine--Geology)

SHATSKIY, Nikolay Sergeyeovich [deceased]; SHCHERBAKOV, D.I., akademik, glav. red.; YANSHIN, A.L., akademik, otv. red. toma; PEYVE, A.V., zam. glav. red.; KELLER, B.M., red.; MARKOV, M.S., red.; MENNER, V.V., red.; PAVLOVSKIY, Ye.V., red.; PUSHCHAROVSKIY, Yu.M., red.; TIKHOMIROV, V.V., red.; KHVOROVA, D.I., red.; KHERASKOV, N.P., red.; TUGOLESOV, D.A., red. izd-va; POLYAKOVA, T.V., tekhn. red.

[Selected works] Izbrannye trudy. Moskva, Izd-vo Akad. nauk SSSR. Vol.1. 1963. 621 p. (MIRA 16:6)

1. Chlen-korrespondent AN SSSR (for Peyve).
(Geology)

ZHEMCHUZHNIKOV, Yuriy Apollonovich; BOTVINKINA, L.N., otv.red.; PEYVE, A.V., glavnyy red.; MARU OV, M.S., red.; MENNER, V.V., red.; TIMOFEYEV, P.P., red.; MISHINA, R.L., red.izd-va; YEGOROVA, N.F., tekhn.red.

[Seasonal varvity and peridlocity of sedimentation] Sezonnaia sloistost' i periodichnoist' osadkonakoplenia. Moskva, Izd-vo Akad. nauk SSSR, 1963. 68 p. (Akademia nauk SSSR. Geologicheskii institut. Trudy, no.86). (MIRA 16:8)

1. Chleny-korrespondenty AN SSSR (for Zhemchuzhnikov, Peyve).
(Deep-sea sediments)
(Silt)

GITERMAN, Roza Yevseyevna; ZAKLINSKAYA, Ye.D., ~~otv.~~red.; PEYVE, A.V., glavnyy red.; MARKOV, M.S., red.; MENNER, V.V., red.; TIMOFEYEV, P.P., red.; RABINOVICH, L.A., red.izd-va; DOROKHINA, I.N., ~~tekhn.~~red.

[Stages in the development of Quaternary vegetation in Yakutia and their stratigraphic significance] Etapy razvitiia chetvertichnoi rastitel'nosti I Akutii i ikh znachenie dlia stratigrafii. Moskva, Izd-vo Akad. nauk SSSR, 1963. 191 p. (Akademiia nauk SSSR. Geologicheskii institut. Trudy, no.78). (MIRA 16:8)

1. Zaveduyushchaya laboratoriyey sporovo-pyl'tsevogo analiza Otdela chetvertichnoy geologii Geologicheskogo instituta AN SSSR (for Zaklinskaya). 2. Chlen-korrespondent AN SSSR (for Peyve). (Yakutiya--Paleobotany, Stratigraphic)

TIKHOMIROV, V.V.; PEYVE, A.V., glav. red.; MARKOV, M.S., red.;
MENNER, V.V., red.; TIMOFEYEV, P.P., red.; MERILLOVA, I.V.,
red.izd-va; SHEVCHENKO, G.N., tekhn. red.

[Geology in Russia in the first half of the 19th century]
Geologiya v Rossi i pervoi poloviny XIX veka. Moskva, Izd-
vo AN SSSR. Pt.2. [Development of basic ideas and trends
in geology] Razvitie osnovnykh idei i napravlenii geologi-
cheskoi nauki. 1963. 485 p. (MIRA 16:12)

1. Chlen-korrespondent AN SSSR (for Peyve).
(Geology)

SOLOV'YEVA, Mariya Nikolayevna; RAUZER-CHERNOUSOVA, D.M., doktor geol.-
mineral.nauk, otv.red.; PEYVE, A.V., glavnyy red.; MARKOV, M.S., red.;
MENNER, V.V., red.; TIMOFEYEV, P.P., red.; KOTLYAREVSKAYA, P.S.,
red.izd-va; NOVICHKOVA, N.D., tekhn.red.; KASHINA, P.S., tekhn.red.

[Stratigraphy and the zone of fusulinids of Middle Carboniferous
sediments in Central Asia] Stratigrafiia i fuzulinidovye zony
srednekamennougol'nykh otlozhenii Srednei Azii. Moskva, Akad.
nauk SSSR. 1963. 132 p. fold. diags. inserted. (Akademiia nauk
SSSR. Geologicheskii institut. Trudy, no.76). (MIRA 16:10)

1. Chlen-korrespondent AN SSSR (for Peyve).

LEBEDEVA, Natal'ya Alekseyevna; NIKIFOROVA, K.V., otv.red.; PEYVE, A.V., glavnyy red.; MARKOV, M.S., red.; MENNER, V.V., red.; TIMOFEYEV, P.P., red.; NOSOV, G.I., red.izd-va; UL'YANOVA, O.G., tekhn.red.

[Continental Quaternary sediments in the Kuban-Azov trough and their association with marine formations] Kontinental'nye antropogenovye otlozheniia Azovo-Kubanskogo proziba i sootnoshenie ikh s morskimi tolshchami. Moskva, Izd-vo Akad. nauk SSSR, 1963. 104 p. (Akademiia nauk SSSR. Geologicheskii institut. Trudy, no.84). (MIRA 1966)

1. Chlen-korrespondent AN SSSR (for Peyve).
